

To the Committee for the 2016 Nobel Prize in Chemistry:
 Prof. Sara Snogged Lise (Chairman),
 Prof. Peter Brzezinski, Prof. Claus Gustaf, Prof. Olaf Trstram,
 Prof. Johan Atavist, and Prof. Gunar Von Heine (Secretary)
 sent via email and regu;ar mail

I respectfully recommend for the 2016 Nobel Prize in Chemistry Professor Ruggero Maria Santilli for the discovery of the new chemical species of magneucules as outlined and documented in detail in the web site

<http://nobelprizeweb.com/index.php/nominations>

I would like to add that Prof. Santilli was listed by the Estonia Academy of Sciences on June 9, 1900 (when still under communist regime) among the most illustrious scientists of all time because he is one of the very few scientists in history to have made fundamental discoveries in mathematics, physics and chemistry.

In faith
